

# Unit 4 - Matching

## Graphs and Equation

THE BASES OF WHAT WE NEED:

EQUATION	GRAPHS
- IF $y$ and $x$	Diagonal:  OR 
- IF $x = \text{something}$	Vertical line: 
- IF $y = \text{something}$	Horizontal line: 

YOU ALREADY KNOW ALL YOU NEED TO KNOW,  
SO FOLLOW THESE STEPS:

### 1 - LOOK AT THE GRAPHS:

- IF DIAGONAL  $\rightarrow$  YOUR EQUATION HAS 2 VARIABLES ( $x$  and  $y$ )
  - IF VERTICAL  $\rightarrow$  it is  $x = \text{something}$ 
    - Look at what place the line is. As in, for example, the line is at  $x = 3$ .
    - That is your equation.
- (you don't have to do a table of values)*

• IF HORIZONTAL  $\rightarrow$  it is  $y = \text{something}$

you don't have to  
do a table of values

• Your equation is  $y =$  to  
where the line goes through

WHEN THE GRAPH  
IS A DIAGONAL LINE:

We are going  
to work  
backwards

1. Pick 3 ORDERED PAIRS ON THE GRAPH.
2. Now, substitute the  $x$  and  $y$  value of one ordered pair in each equation.
3. Once you find the CORRECT equation, substitute the  $x$  and  $y$  values of the second ordered pair to double check!

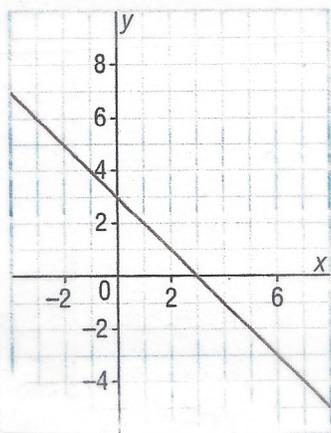

What is the correct Equation?

$$y = 3x + 3$$

$$x + y = 3$$

$$y = 3x - 3$$

Graph A

CHOOSE 3 ORDERED PAIRS

SUBSTITUTE 1 ORDERED PAIR IN EACH  
EQUATION

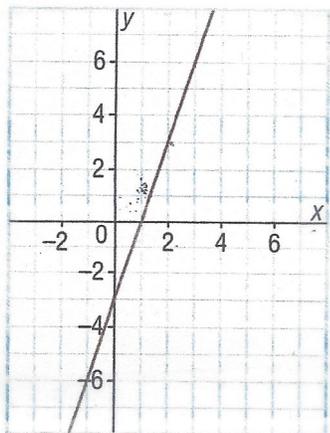

- AFTER FINDING THE CORRECT EQUATION, TRY THE OTHER 2 ORDERED PAIRS

$$y = 3x + 3$$

$$x + y = 3$$

$$y = 3x - 3$$

Graph B

Graph C
